

The Ca\$h Cow Trading Strategy

158% return in 2 days

145% return in 3 days

138% return in 3 days

FINALLY, a high probability, low risk trading strategy capable of producing spectacular returns in as little as 1 to 5 days!

Dear Friend,

Whether you are a newer trader or a seasoned veteran *The Ca\$h Cow Trading Strategy* will be of interest to anyone who would like to become a successful commodity trader and learn how to make higher profits consistently, while limiting downside risk. And all this right in the comfort of your own home.

Over the past 12 months this remarkable short term trading technique has produced an incredible **82%+** winning trade percentage with minimal drawdowns. For the year-end 2002 *The Ca\$h Cow Trading Strategy* achieved an outstanding **411%** ROA return (based on a \$2000 account trading single live cattle contracts). *The Ca\$h Cow Trading Strategy* ended up with an equally impressive return of **339%** in 2001, **291%** in 2000, **419%** in 1999 and **378%** in 1998.

As an avid livestock trader I am constantly scanning the charts looking for low risk, high reward trading situations. About 5 years ago I discovered a pattern in the cattle and hog markets that repeated itself again and again and was extremely accurate. After back-testing and paper-trading this pattern for several years and then real time trading it for the past three and a half years, I was soon convinced that I had found a very profitable short term trading strategy designed to get you in and out of the market quickly thereby limiting risk and exposure.

And from there *The Ca\$h Cow Trading Strategy* was born.

The Ca\$h Cow Trading Strategy pinpoints these **explosive** trading opportunities that occur regularly in the cattle/hog markets allowing you to profit from this price action. It does not matter in which direction longer term cattle/hog prices are moving or what fundamentals are at work. This is a short-term strategy designed specifically to get you in and out of the market in a short period of time, generally 1-5 days.

Just five minutes each evening on your computer or DTN terminal is all it takes to check for your set up the next day. With an average of 4-12 trades a month this little technique will soon put you on the road to profits and trading success.

The Ca\$h Cow Trading Strategy is relatively **quick** and **easy** to learn. In my program I will show you exactly how to look for our trade set up signal and place your entry and exit orders when a signal is generated. Once you have a trade underway I will also show you how to monitor your position so that you'll know when to cash in for maximum profits and safety.
